

### The TectaGreen Modular System

A modular system can be assembled on-site and applied over the top of an already existing rooftop structure. TectaGreen module (2'x2'x4.4") is complete with water retention fabric, 3.5" engineered growing media, and a succulent mix of plants, hardy in zones 4-7. They will flower white, yellow, pink in summer. When actively growing, vegetation will get 4-8" high, up to 12" when flowering. Weight is 20 lbs/sf saturated weight.

The TectaGreen Modular is the only modular system designed to retain large amounts of water, helping to manage stormwater runoff and is a low impact development solution. Anticipate 2.5 gal, or 0.96" water retention from module.

### Product Specification:

2' x 2' x 4.5" Total height (includes 3" wall height) ¼" Wall thickness  
Recycled polyethylene

3/8" predrilled holes (12 total) for drainage and aeration

75-80 lbs saturated weight; 63-73 lbs dry weight
