

Let us put your roof  
to work.

*Buildings use 39% of the energy and  
a staggering 70% of the electricity  
in the U.S.*

Soaring energy prices. Increased corporate responsibility.  
Recognition that healthier workplaces are good for business.  
The environmental benefits of sustainable construction are well-  
documented; now the business advantages are just as clear.

It's no coincidence that green building has moved from a  
niche business to becoming the standard in the industry. Major  
organizations across the globe are incorporating it as part of their  
real estate strategies, with over 80% of U.S. corporations engaged  
in sustainable construction. *They're seeing significant financial  
benefits from energy savings go straight to their bottom line.*

From Tecta America, the nation's largest roofing contractor,  
comes Tecta Environmental Solutions. Tecta ES was formed to  
help businesses utilize their roof as an effective way to generate  
energy and find cost savings. From green roofs to solar installations  
to lightweight materials and more, putting your roof to work is  
smart business.

Tecta ES is the best way to use your building's roof for economic  
and environmental benefits.

ENVIRONMENTAL SOLUTIONS

Rely on the best.

Despite the recent surge in popularity of green building, it's still very much an emerging field. And not everyone has the right qualifications to be performing installations on a roof. It's a job that requires knowledge of OSHA safety regulations, roof penetration and most importantly, how to keep a roof watertight.

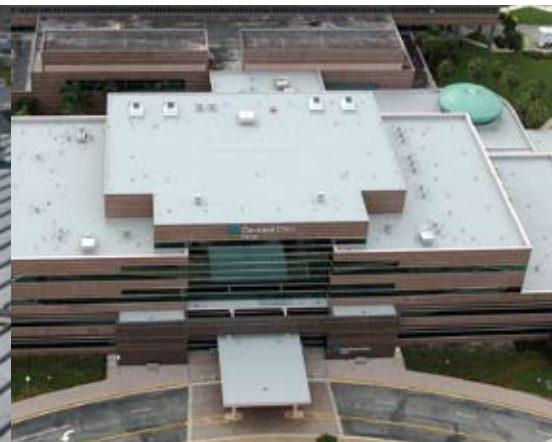

When making an investment in your roof, it's important to turn to a company you can trust. A company that has the right kind of experience and the expertise to do the job right: Tecta America.

Gone are the days of worrying and wondering if a roofing project will be done right. Tecta ES is a single, accountable source. Because we have experience working with all kinds of manufacturers and systems, we guarantee we'll keep all your warranties valid. With materials experts and green roof horticulturists on staff, in addition to our world-class roof technicians, think of Tecta ES as **one-stop shopping for your roof**.

But the real difference in Tecta ES is that we rely on the strength of our **nationwide team of roofing professionals** to perform every job. At each step of the process, our roof experts are there to assure the quality of the work and to ensure the durability of the roof. Something you can't rely on a medley of contractors to do.

*The added expense of building green is typically recovered in the first three years of operation.*

*-U.S. Green Building Council*

## Four areas of expertise. One company you can trust.

Tecta ES is made up of four specialized service lines. We provide full consultation to help you determine which solutions are right for your business. No matter what kind of building you have, we've got the answer.

### TECTA GREEN™

A turnkey green roof solution. We'll perform the entire project from the installation of the roof system through planting and ongoing maintenance. You'll extend your roof's lifespan, save on energy and see tax benefits, all while improving the environment.

### TECTA SOLAR™

Solar technology and roofing expertise come together. We handle financial modeling, financing options, system design, installation and ongoing support to help you save on energy and create a new revenue stream for your business.

### TECTA DAYLIGHT™

Harness the power of natural light with skylights or a daylighting system. We can help determine which system fits your needs and provide installation and regular maintenance.

### TECTA ECO-MATERIALS™

Would your building benefit from lightweight concrete? Or a cool roof? We work with the latest materials and technologies and can help you decide which ones make the most sense to lower your energy costs.

## Why Should I Work With Tecta?

### Expertise

We have LEED-accredited personnel on staff and can ensure that all warranties stay intact. Simply put, we know roofing.

### Accountability

You'll have the confidence and security of knowing exactly who is handling each project.

### Safety

Since our business is roofing, we are trained to work at heights. Non-roofing companies—like landscapers and solar installers—aren't.

### Technology

We have the latest equipment and materials, and know how they interact with every kind of roof so they stay watertight.

### Scale

We have over 3,500 roof technicians and teams of dedicated Tecta ES experts across the country.

Tecta Environmental Solutions is from Tecta America, the nation's leading roofing contractor. Our mission is to provide the most comprehensive roofing program in the country.

### Strength

With more than 50 locations across the country and over 3,500 roofing professionals nationwide, we have a unique ability to provide knowledge and resources that are unmatched in the industry. That means best-in-class responsiveness and the expertise to handle even the most complicated roofs.

### Experience

We offer the stability of a large national roofing contractor with the expertise and individual attention of a local business. Our local branches have an average of 55 years in the roofing business because we consistently meet and exceed our customers' expectations.

### Quality

Our reputation for excellence and innovation means we can handle the largest, most complex projects, no matter the roof. We continually earn praise for both our quality of work and professionalism, so you know your roof will be done right the first time with as little disruption to your business as possible.

*Green buildings have been proven to help with recruitment, retention and overall employee productivity.*
