

# Saint Elizabeth Ann Seton Church

## GENERAL CONSTRUCTION

Completed in December of 2017 for St. Elizabeth Ann Seton in Carmel, Indiana this project was a massive sheet metal job composed of 19000 square feet of graphite-colored panels. The entire project is aesthetically pleasing and is a prime example of how a roof can accent the whole look of the building.

We were instructed to tear off and replace the old copper panels which had previously been installed and colored with a lead-based coating, which had started to fade. While the project ran over budget, the customer and the architect were extremely pleased with the finished product. The architect even paid for drone photos to be taken to submit to magazines and advertise for themselves.

Blackmore and Buckner is a family run company who has been in the roofing business for over 100 years. They are Gold Circle Safety award winners, A Firestone Master Contractor and A GAF Master Contractor.
